Items.....	1.4
Weapons.....	1.5
Encounters With Various NPC.....	1.6
Combat.....	1.7
Game Ending.....	1.8

ACCEPTANCE CRITERIA

Game Start Management

- The System starts a new game, allowing the player to choose with command [**G**] to start with GUI and have an interface, or with the command [**T**] to start with the terminal.
 - By selecting [**NUOVA PARTITA**] the system asks the player to choose a starting class by pressing the various buttons, and choosing a name if the player desires, else is chosen [HAL]. (This option has been implemented to the request of various user.)
- The System loads the last played game by selecting [**CARICA PARTITA**] button, JSON file in the local depository or it closes the game.
- The system saves the game by pressing the [**SALVA**] in the interface. The game creates JSON file locally and closes itself.

Map And Exploration

- The System displays the map through a window to the player, showing the position of its character by using the first letter of the name.
 - It also display the various rooms and doors [shown by #], the NPC friendly [shown by ?] and enemies NPC [shown by !] , the items (which descriptions is shown when the player interacts with it) [shown by *], and weapons (which can be equipped if the class matches) [shown by %]
 - If it interacts with such objects the Systems waits the player to choose the buttons [**SI**] and [**NO**] to grab objects, talk to NPC or open doors.
 - Some objects are Keys which are needed to open locked doors.
- The player can move its character by using the following directional arrows on the keyboard [**←**, **→**, **↑**, **↓**].
 - The System updates the player position by the input sent, but if there are collisions with other objects it does nothing.
- There is also a button [**CURA**] which once pressed, the System heals the player if a potion is in the inventory, which is also shown in a tab close to the map.
- The [**INDIETRO**] button will make the System move the player in the previous room visited without undoing the moves.
- The [**GETTA OGGETTO**] is to discard items using its ID, since the System takes count of the weight of the character and does not permit the player to gain more items if the total weight surpasses the player's limit.
- The boss of the game is shown on the map with a unique symbol [**@**].

Items

- During the explorations the System shows the player the inventory at any given time, even during combat. Each item, weapon included shows its own ID, and it's unique, each duplicate is still shown without stacking.
 - The [**KEY**] is an important item which permits the player to access the final layer and open various doors in the dungeon.

- The [**POZIONE**] is the other fundamental item which permits the player to heal and is used each time the player pushes the [**CURA**] button.
- There is other valuable loot, but its aspect it's purely to simulate the dungeon loot

Weapons

- The System generates a determined number of weapons which may vary to all classes weapons and specific-classes weapons or races focused weapons.
 - The specific classes weapons are identified when the player chooses to pick it up, the systems verifies if the class and race matches, and if it doesn't surpass the weight limit. If not, there is sent a message of the reason the weapon is not collected, else it collects and equips it if there is no primary weapon.

Encounters With Various NPC

- The NPCs are various and behave in two general ways once the player interacts with them.
 - The friendly NPCs will give one line of dialog which could help the player with some valuable information.
 - The hostile NPCs will attack the player when the player chooses to interact with them, entering in combat. If defeated they will give gold to the player.
 - One special encounter is the dragon which on defeat will display the victory and end of the game.

Combat

- Once entering in combat, the System will display the fighting phase, where the name of the enemy, followed by its HP is displayed along with the player's. the System will choose who's first turn is and when the player turn will come it waits for the player to press one of the various buttons [**ATTACCA**] [**CURA**] [**FUGA**].
 - By pressing the [**ATTACCA**] button, the System will verify if a weapon is equipped, if not, the fight will end immediately making the Player escape from the encounter.
 - If the player has a weapon by doing an internal system by calculating the Armor of the player and the dice of the weapon, will choose if it hits or if it misses and counting the amount of damage which is shown in the lower message box.
 - By pressing the [**Cura**] button, the System will verify if any potions are equipped in the inventory and if the players health is full.
 - By doing that the turn automatically is skipped, and the NPC is allowed to attack.

- By pressing the [**FUGA**] button, the System will make the fight end immediately, maintaining each the players and the NPCs current HP, and displaying a mocking dialogue.

Game Ending

- The System displays the game ending in two different ways, the winning conditions which are achieved by getting 1800 **ORO**, or defeating the Dragon. Or displays the losing conditions, if the player reaches 0 HP.
 - The System displays a message which is [**HAI VINTO**], before the game closes itself, if one of the winning conditions are met.
 - The System displays the message which is [**GAME OVER**], before the game closes itself, if the losing condition is met.
